

PLASMA CONCEPTS CONSULTATION & CONSENT RECORD

CLIENT FIRST AND LAST NAME:

PLASMA CONCEPTS USA HEADQUARTERS 800-274-5684

YOUR PLASMA CONCEPTS SPECIALIST PROVIDER:

TECHNICIAN NAME:				

YOUR PLASMA CONCEPTS CONSULTATION RECORD

Plasma Treatments can only be performed by a specifically trained and qualified specialist technician using approved equipment to shrink the skin using a sterile disposable probe. Your specialist technician is trained, qualified by Plasma Concepts, has certification and is fully insured.

Before carrying out the treatment you are, as a patient, required to complete and sign all relevant areas of this consultation record thus giving your absolute consent to treatment. Additionally, you will need to disclose your full medical history as that will determine whether you are a suitable candidate for the proposed treatment. If the specialist does not think you are suitable for the treatment, then your treatment cannot and will not be carried out.

Your specialist will discuss your procedure with you, in full, including what it will involve and the likely benefits. Realistic expectations will be agreed and they will explain any risks, the healing process and will then advise you upon any further treatment you may require if/where necessary. You will then be provided with written aftercare information for you to keep and refer to during the subsequent healing process and it is essential you follow these instructions. Any contra-indications will be recorded on this consultation form and will be used as a reference for any future visits.

It is important that you clearly mark any areas of this form that you wish to have clarified or discussed further. It is ultimately YOUR responsibility to ensure that you understand, in full, the Plasma procedure and the expected outcomes BEFORE your treatment commences.

PLEASE READ ALL OF THE FOLLOWING CAREFULLY AND SIGN, WHERE INDICATED, when you are happy to proceed. You must ensure that all the points below have been discussed with your specialist technician. You are signing to state you understand and accept the terms of your treatment.

TERMS OF YOUR TREATMENT:

- 1. You have chosen an elective cosmetic procedure that is not medically necessary.
- 2. "Fibroblasting" with Plasma is an artistic process not an exact science and it cannot guarantee an exact shrinkage result due to individual skin elasticity, the individual healing process and a range of other factors.
- 3. Some results can be cumulative for optimal effects to be achieved and you may be required to return for additional treatments before your overall procedure is deemed complete. The payment for any additional work, if applicable, will be agreed with you prior to your treatment commencing.
- 4. Depending upon the area of your treatment, additional treatments cannot usually be performed until 12 weeks after the date of your initial treatment. This is in order to allow the area treated initially to fully heal and for the full benefit of the Plasma treatment to be apparent.
- 5. Your specialist will use a treatment plan to record the areas that you have chosen, the anesthetic topical numbing product used, the probe used as well as pre and post treatment photographs. This information will be held in your consultation record.

- 6. The skin type of every client is different and the healing process may in rare cases lead to some discoloration of the skin. Microdermabrasion, skin rejuvenation or other relevant treatment may thus be advised after the healing process is complete should this be the case.
- 7. After each treatment some mild swelling or redness may occur which is completely normal. In some rare cases there may be extreme swelling. Your specialist will give you appropriate advice and aftercare technique to help reduce this
- 8. During your treatment you may experience some minor discomfort depending on the area being treated. Your specialist will reassure you throughout to make you feel comfortable.
- 9. Since the treatment includes controlled micro traumas to the skin, you may experience the smell of plasma reacting with the skin surface during your treatment. This is perfectly normal.
- 10. You must adhere to the specialist's aftercare advice given to you following your treatment. This is very important as it will reduce the risk of post-procedural infection upon leaving the clinic. You must let the treated area heal properly. Avoid picking, rubbing or disrupting the dots as this will hinder the healing process and could make the treatment appear uneven thus requiring further work. Your aftercare regime can make a huge difference to your ultimate results.
- 11. Please be aware that any subsequent skin altering procedures such as plastic surgery, implants, injectables and weight gain may alter the look of your Plasma results.

creating microtraumas to promote new collagen. I understand that multiple treatments may be needed and in

rare cases no improvement may be seen.

I am aware of the possible experience and or risks:
1. DISCOMFORT – some will be felt, varies patient to patient and area to area(initial)
2. MILD TO MODERATE SWELLING – especially around the eyes and in the periorbital area(initial)
3. STINGING SENSATION - for about an hour after treatment (initial)
4. TINY CRUSTS - form on the area treated and usually linger for 5-7 days (initial)
5. DO NOT PICK CRUSTS - This could cause scarring (initial)
6. AVOID SHAVING - in the area treated until all healing has taken place (initial)
7. AVOID HEAT FOR 3-4 DAYS (hot showers, exercise, etc.) (initial)
8. NO SMOKING – this will hinder the healing process (initial)
9. IF POSSIBLE, TAKE VITAMIN C – it helps to boost your immune system (initial)
10. PRE AND POST CARE – I understand that I must comply with recommended pre and post care and following it is crucial for the healing, preventing infection and results of treatment (initial)
11. NO GUARANTEES – I understand that there are no guarantees and refunds will NOT be given (initial)
12. Hyperpigmentation – As a possible adverse reaction, I understand there is a risk of post treatment Hyperpigmentation. This would most likely be due to exposure of the area to UV light while the long-term healing process is taking place or the healing reaction of a client's skin. I understand I should use SPF40 sun protection for at least 12 to 20 weeks (from once the skin has healed several days after the initial treatment) as part of my aftercare program (initial)
13. Pink Atrophic spots (where the dots/spots were applied by Plasma Device) can last up to 6 months after treatment although this is incredibly rare. It is not completely clear what causes this long-term adverse reaction but, so far, this has ultimately subsided on its own in the long-term. It could be due to the use of make-up, other inappropriate products and/or poor personal aftercare during the short-term healing process. As a possible adverse reaction, I understand this is very rare but there is risk of this occurring after treatment (initial)
14. Skin texture may change in the areas treated. It is not completely clear what causes this long-term adverse reaction. It may be due to technician error or poor skin quality but, so far, this has ultimately subsided on its own in the long-term. As a possible adverse reaction, I understand this is very rare but there is risk of this occurring after treatment (initial)

I attest that the following points have been made to me:

- > The potential benefits of proposed treatments.
- > The possible alternate procedures.
- > The probability of success
- > The most likely complications and risks involved with proposed treatments and healing period.
